Dear Friend,

If you're unhappy and embarrassed about the appearance and shape of your tummy, hips, buttocks and thighs if you've finally had enough of putting up with cellulite and you want to turn back time without enduring painful, invasive surgery then here's some especially good news for you.

There is now a safe, affordable and less drastic solution to cellulite...

It's called **Thermal Meltdown** a gentle, specialised program that can dramatically reduce the appearance of cellulite from your body. Using a laser light that raises the temperature of the cells, which in turn melts fat and cellulite deposits followed by a massage it pleurably stimulates the area being treated; effectively breaking down and melting away even hard, congested or fibrosed cellulite around problem fat cells.

Result? Smoother skin as you can see in the AFTER shot below!

Before I tell you more about this amazing breakthrough treatment, let me pose this question...

How Self Confident Would You Like to Feel?

Let's face it, we would all love to feel more comfortable about ourselves, more aware of and happy with our own bodies. But self-image can take a beating over the years, especially with the ravages of stress, a poor diet, sedentary lifestyle, STRESS, too much to do and too little time and speaking of time how long has it really been since you relished slipping into a new pair of shorts, or felt totally comfortable wearing that wrap-around skirt that seems to enjoy exposing your thighs at the first breath of wind? It's hard to feel sexy when you're busy covering up, in case someone spies your secret.

But it doesn't have to be this way because

It's rather remarkable how quickly the treatment begins to make cellulite invisible to the naked eye.

Imagine waking up in the morning and standing in front of your mirror. You turn around and look at your buttocks and thighs. *Usually this is a moment you dread and usually, you slide past the mirror, too afraid and too ashamed to look.* But instead of seeing those all too familiar orange-peel dimples, your eyes are drawn to the smooth silkiness of your skin. Your cellulite seems to be disappearing... and so is your self-consciousness.

You feel alive, and self-assured your skin radiates a healthy glow. You smile with satisfaction as you admire your curves, your mind on that little black dress that you haven't worn in years. You turn and walk out of the room feeling empowered, and with a new spring in your step.

This is Your New Reality

What is Cellulite?

Cellulite is the "orange peel", dimpled appearance of the skin. It can most often be seen on the hips, thighs, buttocks, stomach and also the arms. It affects approximately 90% of women. Other parts of the body may show signs of cellulite too, but the ones we've listed are the most common.

Hormonal changes influence the way fat is stored and how fluid is retained in the subcutaneous layer directly under the skin. Over time, the fat and fluid increases, stretching the skin and inhibiting normal circulation. Vessels can literally be "squashed" between fat cells and at worst, fibrosis results. The normal exchange of oxygen, nutrients and waste that takes place can no longer continue effectively and the destructive cycle continues.

For years we have been told there's really not much that can be done unless you are willing to take the big step of going through painful and often risky surgery. But all this has now changed... you see...

You can now do something about it!

***Introducing Thermal Meltdown
An Amazing Discovery
that Diminishes the Appearance of Cellulite***

**Over 1,000 Treatments Performed Every Day
In Australia!**

Amazing numbers, I know. But women of all shapes and sizes and all nationalities are embracing Thermal Meltdown with zestful glee. In fact, it has been reported that supermodels are raving advocates of the treatment to keep their bodies in the sleek condition a career at the top in the glaring spotlight demands!, as seen on Current Affair program. Men too, are using Thermal Meltdown to treat localised areas of their bodies, in ever increasing numbers, all over the world.

What Is Thermal Meltdown?

It is a gentle and relaxing treatment that leaves you with a general sense of well-being, involves NO medical procedures, or the use of any chemical substances, creams or gels. Thermal Meltdown is a unique, non-invasive way of shaping your body, reducing the appearance of cellulite and improving overall skin fitness.

Once problem areas have been identified by your qualified therapist, they can be focused on and the laser goes to work, deeply melts fat and cellulite deposits, breaking down fibrosis and stimulating circulation and drainage. As the skin is massaged after laser, it stimulates the venous and lymphatic systems and stored up toxins can be released and eliminated.

Cutaneous blood flow can be increased by 400 percent (Laser Doppler measurements) and lymphatic flow by 300 percent (Lymphoscintigraphy measurements).

So pleasurable, it can become addictive, according to many ecstatic patients who have experienced the sheer bliss of Thermal Meltdown.

Not least of all, fibroblasts are stimulated to increase collagen and elastin production generating a healthier rejuvenated skin tone. You'll feel the smooth, silky difference within just a few treatments.

Toxins and abnormal fluid are expelled. The laser energy increases circulation by increasing the formation of new capillaries that in turn help carry more oxygen and nutrients needed of the tissue health leaving your skin smooth, silky and toned.

Do You Know What Stage YOUR Cellulite is at?

Without intervention cellulite does tend to worsen over time. The buttocks and thighs are the areas where it is easiest to identify the stage your cellulite is at. There are FOUR stages.

1. **While standing or lying down, the skin appears smooth and no dimples can be seen on the surface.**
2. The skin has a dimpled appearance when it is pinched or when you are seated on a hard surface. Many an unsuspecting celebrity has been photographed by the paparazzi in just such a pose, and included in magazine articles about cellulite. (And you'll notice many of these celebrities appear slim as a reed!)
3. **Cellulite is visible when you are standing, but appears smooth when you recline.**
4. Cellulite is visible in both a standing and lying position.

We all get busy, we get caught up. Our days are filled with other people's problems, with other people's dramas and deadlines. We try to please everyone and often struggle to keep up with all of the demands placed on our time. We find it hard to stop and take time out for ourselves. But that's what needs to be done if you want lasting change. You need time to yourself, time to relax and time to recharge. And the only permission you need is YOUR OWN!

Exercise Alone Will NOT Get Rid Of Cellulite!

It's fallacy that exercise will get rid of cellulite. It just doesn't work that way. Cellulite is fluid trapped in the subcutaneous layer directly under the skin. Over time, this fat and fluid increases, stretching the skin inconsistently and inhibiting normal circulation.

The fat becomes even harder to metabolise and toxins begin to build up instead of being flushed out as nature intended! Exercise is vital for good health, but no matter how much exercise you do *your cellulite just won't budge*.

You need an alternative. While we know every body is unique, we will carefully assess YOUR figure so we can recommend the best possible treatment to help you get results. And your next step is easy.
